- 18 V, 5.0 Ah battery for powerful fastening performance; automatic two-speed operation for fast rundown and accurate final torque
- Provides torque within ±3% of target; store application results for up to 12 different users; audit mode performs checks on pre-tightened bolts
- Secondary "safe-to-start" trigger keeps finger away from pinch points at tool startup; once the tool is running, the operator can relocate their hands
- Intelligent joint sensing technology continually measures the joint during tightening and—when necessary—dynamically brakes to avoid torque over-shoot
- Two-way communication via Bluetooth® or USB cable streams tool data live or can download up to 3,000 event readings; PC software included
- The new CTM is designed to offer outstanding performance while minimizing the traditional overheating problem of battery-operated tools—under the same conditions, the CTM will continue to work while most competitors have to be stopped to cool
