- Tool set for removing ball joints from the steering knuckle on Ford Transit models from 2014 onwards, both on versions with bolt fastening and without bolt fastening
- No pulling force is exerted on the ball pin during removal. This allows the ball joint to be removed efficiently without pulling loose or damaging the ball connection
- Instead, a pressing force of up to 18 tonnes is applied directly to the ball joint housing. In combination with press frame 1090 55 C and a hydraulic cylinder, even heavily corroded ball joints can be removed without any problems
- The set includes a milling tool that can be used to safely remove the bolt ears from the ball joint. This allows the ball joint to be pressed out safely and in a controlled manner with the pressing tool, without damaging the steering knuckle or the ball joint itself
- No axial load on the ball pin
- Direct pressing load on the ball housing
- Suitable for heavily seized or rusted ball joints
- Less risk of damage to the steering knuckle and steering components
- Faster and safer disassembly compared to conventional methods
- Application:
 - Ford Transit (from year of manufacture 2014)
 - Ball joints with bolt fastening and press fit
- Contents of the set:
 1. 02 00016 001 – Press mould
 2. 02 00016 002 – Press adapter
 3. 02 00016 003 – Guide bushing
 4. 02 00016 005 – Press bushing
 5. 02 00016 006 – Press bushing
 6. 02 00016 007 – Guide bolts (2 pieces)
 7. 02 00016 012 – Hole saw Ø 29 mm
 8. 02 00016 013 – Hole saw holder Ø 9 mm, range 14 – 30 mm
- Recommended hydraulic cylinders
 - W0100030
 - W1090-02-WAL
 - W1090-03*
- * Additional adapter required: W0200016-020
